Portable Workflow for HR Onboarding

Agent-run onboarding that works with any HR stack | Powered by Striim

THE WORKFLOW

01 HRIS / Payroll

02 SMS

03 Transactional email

04 Team chat

05 Background screening

06 Onboarding documents

07 Document storage

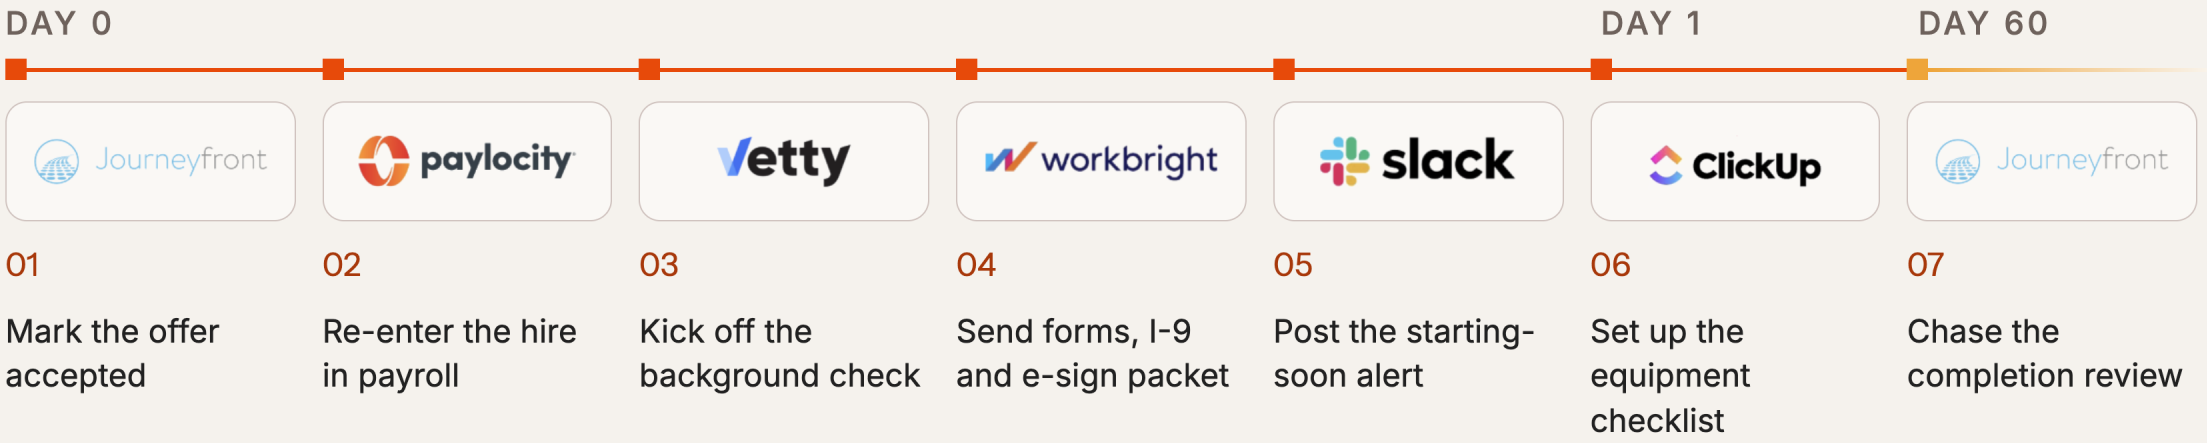

08 AI packet recommendations

09 RPA automation

THE PROBLEM

Onboarding one person today means juggling multiple tools

What HR does by hand for one new hire, in one customer's stack

Nine separate tools

Payroll, email, SMS, chat, screening, docs, and storage are all separate tools.

Repeat

HR copies data between them and chases each step.

Hard-wired flows

Workflows are hard-wired to specific tools, so changing one tool means rebuilding the flow

SOLUTION

One Workflow. One UI. Connect any tool

01
HRIS / Payroll
BambooHR, Workday

02
SMS
ActiveCampaign

03
Transactional email
Postmark

04
Team chat
Slack, Teams

05
Background screening
Vetty

06
Onboarding documents
WorkBright

07
Document storage
Google Drive

08
AI packet recommendations
Claude

09
RPA automation
Playwright

LAUNCH

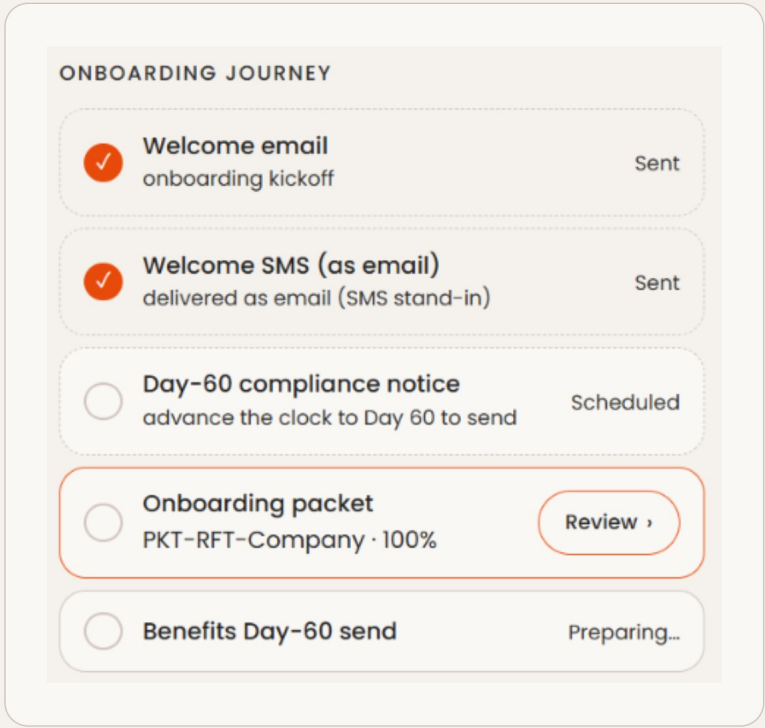

Once you hit launch, agents run the whole process

01 **Pick your tools**
Choose the app behind each of the nine steps.

02 **Launch onboarding**
One hiring event starts the whole journey.

03 **Agents run it end to end**
Messages, checks, documents and timers, all handled.

04 **HR handles the exceptions**
Only the decisions that need a person reach HR.

LEDGER + HUMAN IN THE LOOP

The Ledger tracks every step, and HR signs off where it matters

EVERY STEP, EVERY HIRE

The MoolAI Ledger records each step for each new hire.

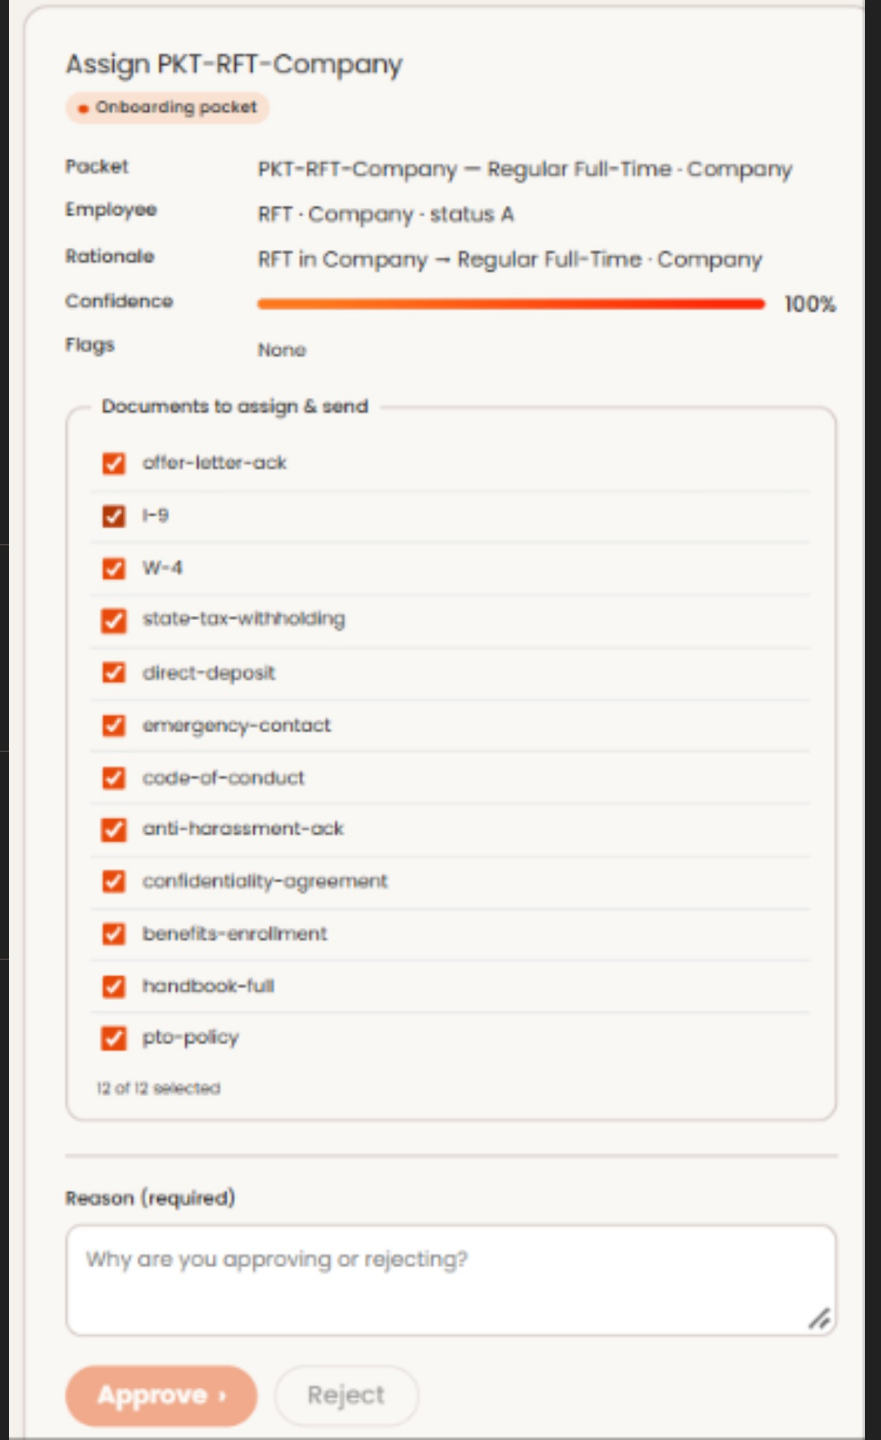

NOTHING TWICE, NOTHING SKIPPED

Every action runs exactly once.

A PERSON DECIDES

Human in the loop steps wait until HR approves, with a reason.

MoolAI

PORTABILITY

You can swap or remove a tool without rebuilding the workflow

Add

Plug in a new screening or document vendor.

Replace

Switch SMS providers or chat apps by changing a dropdown.

Remove

Drop a tool you no longer pay for. That step is reconfigured, not broken.

New hires already in progress keep going, because the Ledger holds their state.

WHERE STRIIM FITS

Striim keeps your HR data in sync across systems

Your HR system

BambooHR, Workday, or whatever comes next.

striim

Streams employee changes in real time, in either direction.

MoolAI Ledger

One format, whatever the vendor sends.

Nine workflow steps

They read the record, never the vendor.

STRIIM MAKES THE DATA PORTABLE. MOOLAI MAKES THE WORKFLOW PORTABLE.

MIGRATION

Striim can move employee data between HR systems

Switch systems mid-journey. The Ledger resumes every hire from their last completed step.

MoolAI Ledger

Everything already known about every hire.

→

striim

Maps the Ledger format into the new vendor's.

→

Your new HR tool

Workday, Paylocity, the next one.

No downtime

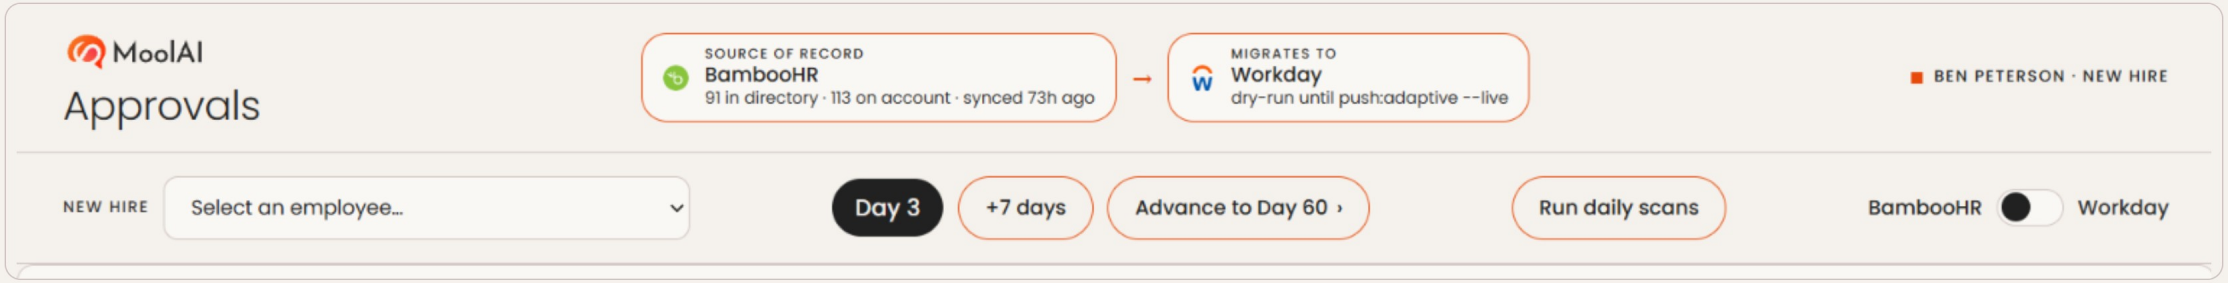

The nine steps keep running straight through the cutover.

No pause

Day-60 timers keep counting; pending approvals stay pending.

Nothing lost

Every record keyed on its source id — re-run it and it matches.

HOW WE STAND OUT

What makes this different from other HR tools

A buyer asks	A typical HR tool	MoolAI HR Workflow
We use a different HRIS	Wait for a connector	Works with any HRIS
Can you migrate our data?	Export, transform, import	Striim moves it, either way
Downtime for the cutover?	A maintenance window	None
What if a step runs twice?	Hope, or a dedupe script	The Ledger blocks it
Who approves a pay change?	Buried in an audit log	HR, inside the workflow

VALUE

What this means for HR, IT, and the business

HR

One place to run onboarding, with approvals that don't get lost.

IT

Freedom to change the stack without rebuilding workflows.

ENTERPRISE

Continuity, visibility, preserved history across transitions and no vendor lock-in

Your business process should outlive your software.
